

LAPORAN SUMBER DATA & LOGIKA PERHITUNGAN DASHBOARD

IFRS 9

Sistem: IFRSPro • Tenant: ifrspro_tenant_iaf

1. Sumber Data Dashboard

1.1 Tabel Utama

No	Komponen	Nilai
1	Database	ifrspro_tenant_iaf
2	Schema	ifrs9
3	Tabel Utama Dashboard	frs9_master_account
4	Fungsi Tabel	Data master akun untuk overview / snapshot dashboard

Referensi: menu_database_analysis_report.md — Section 1 (DASHBOARD)

2. Active Accounts

2.1 Sumber Data

Komponen	Nilai
Tabel	frs9_master_account
Kolom Utama	account_id, account_status, banking_type, prc_date

2.2 Logika Query

```
SELECT COUNT(account_id) as total_active_accounts
FROM ifrs9.frs9_master_account
WHERE
    banking_type = 'conventional'
    AND account_status IN ('Active', 'A', '1')
    AND prc_date = (
        SELECT MAX(prc_date) FROM ifrs9.frs9_master_account
    );
```

2.3 Alur Data

Tahap	Penjelasan
1	Frontend akses URL /banking/dashboard?mode=conventional
2	Backend memanggil service dashboard
3	Database menjalankan query COUNT Active di frs9_master_account
4	Dashboard menampilkan angka Active Accounts

3. Total ECL (Expected Credit Loss)

3.1 Sumber Data

Komponen	Nilai
Tabel	frs9_master_account
Kolom	ecl_amount
Alasan	Hasil akhir perhitungan ECL di-stamp ke tabel master

3.2 Logika Query

```
SELECT SUM(ecl_amount) as total_ecl_amount
FROM ifrs9.frs9_master_account
WHERE
    banking_type = 'conventional'
    AND prc_date = (
        SELECT MAX(prc_date) FROM ifrs9.frs9_master_account
    )
    AND account_status IN ('Active', 'A', '1');
```

3.3 Alur Data ECL

Tahap	Penjelasan
1	Engine menghitung ECL (kolektif & individual)
2	Final ECL ditulis ke frs9_master_account.ecl_amount
3	Dashboard mengambil SUM(ecl_amount)

4. Total Exposure (Outstanding Balance)

4.1 Sumber Data

Komponen	Nilai
Tabel	frs9_master_account
Kolom	outstanding_balance / ead_amount

4.2 Logika Query

```
SELECT
    SUM(outstanding_balance) as total_exposure
FROM ifrs9.frs9_master_account
WHERE
    banking_type = 'conventional'
    AND prc_date = (
        SELECT MAX(prc_date) FROM ifrs9.frs9_master_account
    )
    AND account_status IN ('Active', 'A', '1');
```

5. High Risk Accounts (Stage 3 / Impaired)

5.1 Sumber Data

Komponen	Nilai
Tabel	frs9_master_account
Kolom	impaired_flag, stage

5.2 Logika Query

```
SELECT
    COUNT(account_id) as total_high_risk_accounts
FROM ifrs9.frs9_master_account
WHERE
    banking_type = 'conventional'
    AND prc_date = (
        SELECT MAX(prc_date) FROM ifrs9.frs9_master_account
    )
    AND (impaired_flag = 'Y' OR stage = '3');
```

6. ECL Distribution (By Stage)

Sumber data tetap menggunakan frs9_master_account sebagai single source of truth.

6.2 Logika Query

```
SELECT
    stage,
    COUNT(account_id) as total_accounts,
    SUM(ecl_amount) as total_ecl,
    (SUM(ecl_amount) * 100.0 /
        (SELECT SUM(ecl_amount)
            FROM ifrs9.frs9_master_account
            WHERE prc_date = (SELECT MAX(prc_date) FROM
ifrs9.frs9_master_account)
        )
    ) as percentage
FROM ifrs9.frs9_master_account
WHERE
    banking_type = 'conventional'
    AND prc_date = (
        SELECT MAX(prc_date) FROM ifrs9.frs9_master_account
    )
    AND account_status IN ('Active', 'A', '1')
GROUP BY stage
ORDER BY stage;
```

7. Portfolio Exposure Trend (Time Series)

7.1 Sumber Data

Komponen	Nilai
Tabel	frs9_imp_ca_ecl_sum
Fungsi	Rekap historis exposure & ECL per tanggal

Alasan: frs9_master_account terlalu besar untuk time series.

7.2 Logika Query Trend

```
SELECT
    prc_date,
    SUM(total_exposure) as exposure
FROM ifrs9.frs9_imp_ca_ecl_sum
WHERE
    prc_date >= (CURRENT_DATE - INTERVAL '12 months')
    AND portfolio_type = 'conventional'
GROUP BY prc_date
ORDER BY prc_date ASC;
```

8. Ringkasan Sumber Data Dashboard

Metrik	Tabel	Operasi	Kolom
Active Accounts	frs9_master_account	COUNT	account_id
Total ECL	frs9_master_account	SUM	ecl_amount
Total Exposure	frs9_master_account	SUM	outstanding_balance
High Risk (Stage 3)	frs9_master_account	COUNT	impaired_flag / stage
ECL Distribution	frs9_master_account	GROUP BY	stage, ecl_amount
Exposure Trend	frs9_imp_ca_ecl_sum	SUM (Time Series)	total_exposure

9. Kesimpulan Umum

Dashboard IFRS 9 menggunakan pendekatan Single Source of Truth. Snapshot data (Active Accounts, Total ECL, Total Exposure, Stage 3, ECL Distribution) diambil dari frs9_master_account. Sementara data tren (Portfolio Exposure Trend) dibaca dari frs9_imp_ca_ecl_sum untuk performa tinggi tanpa join berat.
